Dear Sir:

Thank you for the information in regard to *Eleocharis Engelmanni* and note on *Grindelia*.

I send you by mail to day a spem of the var *dictonoa*. I found only 4 good spems — did not look for it much — taking it for form of *obtusa*.

The spem I keep has a little longer spikes — I send 2 or 3 spikes from it — stuck in a piece of paper.

You will notice a tendency to produce little spikes from the base of the larger one — as many as 3 spikes in the spem I send you show this peculiarity. Do it so in any other species — and in the typical form of this species?

I also send 2 or 3 *Juncei*. Please

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

look over them at your leisure,
and if anything but tennis and
megacephalus please let me know.

Can you send me 2 or 3 specimens
of the typical Elecharis Engelmanni?
If so I will be glad to send in
exchange (if I find it, that is) specimens
of the rare next season,

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

MISSOURI BOTANICAL GARDEN

OQUAWKA, ILL., Nov. 16, 1874.

DEAR SIR:

I propose to issue, for circulation among the working Botanists of this State, a little monthly sheet (about the size of the Torrey Botanical Bulletin) devoted to the publication of a Catalogue of the

PLANTS OF ILLINOIS.

I shall aim to include all species and marked varieties known to occur within our limits—to give localities and collectors' names for those which are not common—and indicate the area of distribution of such species as do not occur throughout the State. Three pages will be devoted to the List and one to miscellaneous notes.

I beg your co-operation in this matter.

Inclosed you will receive the first sheets of a list printed for the purpose of collecting information on the subject. It is made up from Mr. I. A. Lapham's List—published in 2d Vol. Trans. Ill. Ag'l Soc'y, 1856-7—the additional list in 4th Vol. by Dr. Vasey and others, and several local catalogues.

Please mark (by a — at the left of the name) every species and variety which you know grows in the State —especially those which I have omitted—give all stations of rare plants known to you—note any peculiarity of the species not mentioned in our popular Manuals, and as far as possible indicate the Northern limit of species having a Southern range and vice versa.

☞I hope also that you will contribute to our page of miscellaneous notes.

Yours very respectfully,

HARRY N. PATTERSON.

Ans Jan 22

Aquanka, Ills., Dec. 7, 1874.

Dr. Engelmann.

Dear Sir;

Thanks for your ~~offer~~ promise to help us in getting up catalogue of Ills. plants. Doubtless you know ~~all the~~ pl what plants grow in Ills opposite St. Louis even when you have not collected them yourself.

~~In~~ regard I send the balance of the list to Compositae. When these sheets (the first 8) are returned I wish to prepare the copy for that much of the list.

Cuscuta cuspidata is indeed an interesting find. I would be glad to exch. something interesting from this locality for it. Would you oblige me by speaking to Mr. Eggert on the ~~matter~~ subject, or give me his address?

Yours very resply Henry N. Patterson, (over).

Yes, I will notice introduced
plants in the list, but forgot to do
so in my proof-list.

Argemone Mexicana grows here
about gardens & roadsides - escaped from cult.

Cleome integrifolia is common
here in waste places & spreads
along roads. Int. probably 7 to 10 years ago how
I know not.

Lecchea tenuifolia was probably a
mistake.

Ogunquit, Me., Jan. 28/95.

Dr. Geo. Engelmann.

Dear Sir:

Your letter of 22d inst. recd. I ~~was~~ feared you had forgotten me, and was very glad to hear from you. I will answer your queries in order, premising by saying ~~that~~ I include in my "proof-list" all the plants which have been published as Me. pls. in the various lists which have appeared in the Repts of Agl Socy, &c., &c. Many pls. have been admitted to our flora which have really never been found, and it is for the purpose of getting rid of these species and ascertaining the range of those which really belong to our flora that I issue the proof-list first.

Now for your queries:

Vitis aulpina was given in Vol. 4, Trans. Agl. Socy - I dubbed a quintuple on I now learn of it from no one.

Vitis Labrusca is prob. a mistake also

" Lipinnata is found ~~in~~ at Grand

Tower (Jackson Co., I believe) by Prof.

Arendt, from whom I have specimens.

Acer rubrum grows in the S.-west

Vasey, Forbes, &c

Sapindus perennis, common near Cadiz,

also in Ogle Co.

Lespedeza Stuvei Prof. Hill reports in

Kankakee Co.

Viburnum obovatum I copied from Darlington's

Catalogue - probably a mistake.

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

If not too much trouble I wish

you would go over the proof-list & mark

all the plants which you know to grow

in the region opposite St. Louis (indicating

the Co. when other than St. Clair.)

It may give me a hint for some

Southern species & vice versa, and would

be of interest to me anyhow. Any

notes on the frequency of the species

&c

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

would also be gladly used by me — as your information would be reliable, & that is what I wish in making up this list. One out other proof-list is out, now — that sent to Dr. Schneck, who is said to have found Cabomba Caroliniana in Wabash Co.

I notice your name is given in the Manual as authority for Malvastrum angustum on Rock Island — do you know of any other station in Ills, or on the opposite bank of the Miss. river?

Yours very respectfully
Harry N. Patterson.

I will be very glad to receive the specimen of Ascenta auriculata of which you kindly promise me.

Dr. Geo. Engelmann.

Dear Sir:

I spent two delightful months in the neighborhood of Georgetown, Colo., this summer, returning about a week ago. Nearly everything I saw was new to me and you may imagine how I enjoyed botanizing there. Then, I had the company of Rev. E. L. Greene in many of my excursions.

At the base of Grays Peak I found specimens of Gentiana prostrata and G. tenella which Mr. Greene pronounced larger than any he had ever seen, and thinking they might interest you, I send duplicate. G. humilis I found in great abundance in the lower part of Georgetown — can send you some of it if you desire but cannot get at one just now.

Aguanga, Dlas.,
Oct. 7/75.

Dr. Geo. Engelmann.

Dear Sir;

Your last letter was duly rec'd but I have waited until I could get plenty of ripe seeds of Cleome integrifolia — which I send by this mail. — If your friend will plant it along the roadside or in any waste place he will probably have enough of it next year — and ever after. It doesn't seem to take kindly to cultivation.

The weather, during the two months I was in Colorado was nearly all of one kind — and a very cool and wet kind it was. But the rains usually came in the afternoon — and as getting wet seemed to have no bad effect on anything except my portfolio I did not

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

allow the weather to interfere much with my botanizing using a basket and umbrella when it was very wet.

I much prefer Illinois to Colorado - except for botanizing.

I got a few fungi, mostly too young, of which I send duplicates by this mail. Will you kindly look over them and tell me what they are?

The Ills. Catalogue is progressing - slowly.

Very respectfully yours,
H. N. Patterson.

MISSOURI BOTANICAL GARDEN

non-botanical people, being known (the fruit) as the "big shellbark". It is scattered in large quantity over reasons. The wood is known as "bottom hickory". I send in another package some of the nuts. These were all gathered in one day, and within a radius of half a mile & show considerable variation in the shape of ~~front~~ nut. The one marked "Common" is the usual form. I had some with thinner shell, but cannot find any now.

"B" grows in the bottoms, with Quercus nigra. It is known as "hard-head" hickory nut - the nuts have a small kernel which it is difficult to extract, and are not gathered for eating. I have no fruit of it at hand now, nor mature lvs of either species.

Does Mr. Eggert collect for ex-

HERBARIUM OF HARRY N. PATTERSON,

OQUAWKA, HENDERSON CO., ILL.,

Feb. 8th 1880.

Dear Dr. Engelmann:

Since printing the check-list of Gamopetalae, (a copy of which I sent you in December), I have concluded to print a list of the Polypetalae also. At the end of this list (now half completed) I wish to put in the other Orders which have been elaborated in Apetalae and Endogenae — Chenopodiaceae and Liliaceae. I would also like to put in any scattered genera which I can get in full, i. e., all North Am. species.

I now write to ask if you can, without much trouble, give me a full list of North American Coniferae — (including Mex. species, if any, which approach our boundary and are likely to cross it). I would like the genera in their natural order — the species I put alphabetically for convenience. Perhaps you could also give

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

me the Cupuliferae, or at least the genus
Quercus — with the species as you now
regard them. Would like all varieties
given which are at all distinct, with authorities.
If the above would require more
work than a mere writing out of
the names from your papers, do not
let me trouble you with it at all,
but kindly give me the changes you
would now make — if any — in the
papers on Quercus and Pinus which
you have already sent me.
The lists are printed largely for
the benefit of our botanists and my own
exchanges. The profit will only be
small if all the copies are sold.

Respectfully yours,
H. N. Patterson.

Will be ready for copy about Feb. 20.

HERBARIUM OF HARRY N. PATTERSON,
Oquawka, Ill., Nov. 22, 1882

Dear Dr. Engelmann:

I thank you for your thoughtfulness in sending me the note on Marsilia, especially as I am even now beginning to get fresh notes for the purpose of issuing another edition of the list of Ill. plants, for which there is considerable demand.

Have not heard from our good friend Pringle since he left me for St. Louis, but I presume you did not make way with him there and that he is now safe in Vermont.

Among labels for Curtiss (from Reverchon, who collected for him this season) I have one for Quercus San Sabeana. I presume he must have got the name from you. Do you now consider it distinct, or should I print it Q. undulata?

What is this grape Eggert sends me? Not much material to tell from, but I might not be able to make it out if I had the whole vine. (Kindly return to me his letter when you write.)

Two more of Reverchons plants are Croton Neo-Mexicanum Müll. Arg. — who is the authy? and Houstonia patens, Ell. Is this latter now considered distinct from H. coerulea, with which it is united in Chapm Flora?

Any notes on Ill. plants will always be acceptable. You sent me a good many once before which I will now use. Yours, H. N. Patterson.
